SATOSHI GENESIS

Tokenomics Graphic

A dual-token ecosystem where SGEN anchors long-term value and governance while SFUEL powers rewards, utility, burns, and ecosystem activity.

Default fee routing model

SGEN

Satoshi Genesis

Core token for staking, governance, premium rights, and long-term ecosystem alignment.

- Fixed supply of 21,000,000
- No future minting after deployment
- Used for staking and governance participation
- Unlocks premium ecosystem access and stronger reward rights

SFUEL

Satoshi Fuel

Utility and reward token for participation, access, upgrades, burns, and ecosystem flow.

- Programmed emission ceiling of 2,100,000,000
- Designed for earning, spending, and burn-linked circulation
- Supports activity, access, upgrades, and reward mechanics
- Emissions reduce over time under controlled logic

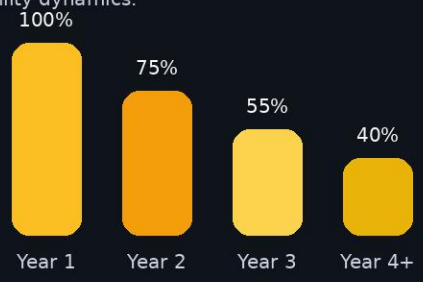
SGEN Allocation

Fixed supply allocation designed for disciplined launch structure, treasury strength, and community participation.

- **35%** Community and staking rewards
- **20%** Liquidity and market depth
- **15%** Treasury reserve
- **10%** Development fund
- **10%** Team and founders
- **5%** Partnerships and ecosystem growth
- **5%** Community bootstrap and airdrops

SFUEL Emission Schedule

Reward emissions start stronger during bootstrap, then reduce over time to control inflation and support healthier utility dynamics.



Default Fee Routing

Working model for ecosystem fees. Treasury is multi-signature controlled and policy-led, not marketed as guaranteed price support.

- **40%** Treasury
- **30%** SFUEL burn / buyback-and-burn
- **20%** Staking reward support
- **10%** Ecosystem growth wallet

Value Loop

1. Users join and participate
2. Users earn and use SFUEL
3. SFUEL is spent, burned, and fees are routed
4. SGEN staking and governance strengthen the core

Satoshi Genesis — One token holds value. One token powers the engine.
